Re: Soil Sampling Results

Dear :

The United States Environmental Protection Agency (EPA) took soil samples from your residence on November 5, 2009. Five soil samples down to six inches were combined from the grassy area in your back yard. This composite soil sample was analyzed for polychlorinated biphenyls (PCBs) and dioxin/furans. Enclosed are your results along with an EPA fact sheet that describes the complete results for the community.

The levels of PCBs and dioxin/furans highlighted in the enclosed results for your property were below current preliminary remediation goals (cleanup goals) recommended by EPA. However, because your property is in an area with many industries, we are enclosing a fact sheet from the Illinois Department of Public Health about how to reduce exposure to contaminants in soil. You may wish to follow some of these practices as an extra safeguard or share the information with your family and neighbors.

If you have any questions regarding this work, please contact:

Ken Bardo U.S. EPA, Region 5 77 W. Jackson Blvd. Corrective Action Section, LU-9J Chicago, Illinois 60604-3590

Ken may be reached at 312-886-7566 or by e-mail at bardo.kenneth@epa.gov. Stephanie may be reached at 312-353-2315 or by e-mail at linebaugh.stephanie@epa.gov.

Re: Soil Sampling Results

The United States Environmental Protection Agency (EPA) took soil samples from the property you rent at 1421 Nickell Street on November 6, 2009. Five soil samples down to six inches were combined from the grassy area in the front yards of 1419 and 1421 Nickell Street. The composite soil sample was analyzed for polychlorinated biphenyls (PCBs) and dioxin/furans. Enclosed are the results along with an EPA fact sheet that describes the complete results for the community.

The level of PCBs highlighted in the enclosed results for your property of 1,010 parts per billion slightly exceeds the preliminary remediation goal (cleanup goal) of 1,000 parts per billion for residential soils recommended by EPA. The level of dioxin/furans and dioxin-like PCBs highlighted in the enclosed results do not exceed EPA's current preliminary remediation goal of 1 part per billion.

The level of PCBs found on the property you rent is low and do not pose an immediate problem, but EPA recommends that you follow the advice in the enclosed fact sheet from the Illinois Department of Public Health on how to reduce exposure to contaminants in soil. In the coming year, EPA, in consultation with the State of Illinois, will further evaluate the sample results to determine whether additional actions are necessary. EPA will keep you informed of our progress.

Re: Soil Sampling Results

Dear

The United States Environmental Protection Agency (EPA) took soil samples from two areas of the Village Park and one area near the Baseball Field on November 5 and 6, 2009. Five soil samples down to six inches were combined from the grassy area in each of the three areas. The three composite soil samples were analyzed for polychlorinated biphenyls (PCBs) and dioxin/furans. Enclosed are the results (detections are highlighted in yellow) along with an EPA fact sheet that describes the complete results for the community. A map is also included to show the three areas where the composite soil samples (SS-17, SS-18, and SS-34) were taken.

The level of PCBs in the westerly sample (SS-17) along Little Avenue in the Village Park is 1,101 parts per billion. This slightly exceeds the preliminary remediation goal (cleanup goal) of 1,000 parts per billion for residential soils recommended by EPA. The level of PCBs in the easterly sample (SS-18) along Little Avenue in the Village Park and the area east of the Baseball Field (SS-34) were below the cleanup goal. The level of dioxin/furans and dioxin-like PCBs for all Village Park and Baseball Field samples were below EPA's current preliminary remediation goal of 1 part per billion.

The level of PCBs found on village property is low and does not pose an immediate problem, but EPA recommends that the village follow the advice in the enclosed fact sheet from the Illinois Department of Public Health on how to reduce exposure to contaminants in soil. In the coming year, EPA, in consultation with the State of Illinois, will further evaluate the sample results to determine whether additional actions are necessary. EPA will keep you informed of our progress.

Re: Soil Sampling Results

Dear ::

The United States Environmental Protection Agency (EPA) took soil samples from your residence on November 5, 2009. Five soil samples down to six inches were combined from the grassy area in your front yard. This composite soil sample was analyzed for polychlorinated biphenyls (PCBs) and dioxin/furans. Enclosed are your results along with an EPA fact sheet that describes the complete results for the community.

The level of PCBs highlighted in the enclosed results for your property of 1,600 parts per billion exceeds the preliminary remediation goal (cleanup goal) of 1,000 parts per billion for residential soils recommended by EPA. The level of dioxin/furans and dioxin-like PCBs were below EPA's current preliminary remediation goal of 1 part per billion.

The level of PCBs found on your property is low and do not pose an immediate problem, but EPA recommends that you follow the advice in the enclosed fact sheet from the Illinois Department of Public Health on how to reduce exposure to contaminants in soil. In the coming year, EPA, in consultation with the State of Illinois, will further evaluate the sample results to determine whether additional actions are necessary. EPA will keep you informed of our progress.

For more information, please contact:

Ken Bardo U.S. EPA, Region 5 77 W. Jackson Blvd. Corrective Action Section, LU-9J Chicago, Illinois 60604-3590

or

Re: Soil Sampling Results

Dear :

The United States Environmental Protection Agency (EPA) took soil samples from your residence located at 1010 Sycamore Street in East St. Louis, Illinois on November 4, 2009. Five soil samples down to six inches were combined from the grassy area in the front yard and along your house. This composite soil sample was analyzed for polychlorinated biphenyls (PCBs) and dioxin/furans. Enclosed are your results along with an EPA fact sheet that describes the complete results for the community.

The level of PCBs highlighted in the enclosed results for your property of 4,400 parts per billion exceeds the preliminary remediation goal (cleanup goal) of 1,000 parts per billion for residential soils recommended by EPA. The level of dioxin/furans and dioxin-like PCBs highlighted in the enclosed results for your property was below EPA's current preliminary remediation goal of 1 part per billion.

The level of PCBs found on your property is low and do not pose an immediate problem, but EPA recommends that you follow the advice in the enclosed fact sheet from the Illinois Department of Public Health on how to reduce exposure to contaminants in soil. In the coming year, EPA, in consultation with the State of Illinois, will further evaluate the sample results to determine whether additional actions are necessary. EPA will keep you informed of our progress.

Re: Soil Sampling Results

Dear

The United States Environmental Protection Agency (EPA) took soil samples from the property you rent at 1435 Nickell Street on November 6, 2009. Five soil samples down to six inches were combined from the grassy area in your front yard. The composite soil sample was analyzed for polychlorinated biphenyls (PCBs) and dioxin/furans. Enclosed are the results along with an EPA fact sheet that describes the complete results for the community.

PCBs were not detected at your property and the level of dioxin/furans detected at your property was below the current preliminary remediation goal (cleanup goal) recommended by EPA. However, because your property is in an area with many industries, we are enclosing a fact sheet from the Illinois Department of Public Health about how to reduce exposure to contaminants in soil. You may wish to follow some of these practices as an extra safeguard or share the information with neighbors.

Re: Soil Sampling Results

Dear

The United States Environmental Protection Agency (EPA) took soil samples from the property you own at 1449 Queeny Avenue and the property you rent at 1451 Queeny Avenue. Five soil samples down to six inches were combined from each grassy area in the back yard of 1449 Queeny Avenue and the front yard of 1451 Queeny Avenue. The two composite soil samples were analyzed for polychlorinated biphenyls (PCBs) and dioxin/furans. Enclosed are the results along with an EPA fact sheet that describes the complete results for the community.

The levels of PCBs and dioxin/furans highlighted in the enclosed results for your property were below current preliminary remediation goals (cleanup goals) recommended by EPA. However, because your property is in an area with many industries, we are enclosing a fact sheet from the Illinois Department of Public Health about how to reduce exposure to contaminants in soil. Re: Soil Sampling Results

Dear Sir or Madam:

The United States Environmental Protection Agency (EPA) took soil samples from your residential properties located at 1451, 1453, and 1468 Queeny Avenue and 1425 and 1433 Nickell Street on November 6, 2009. Five soil samples down to six inches were combined from each grassy area in the front yards of 1451 and 1453 Queeny Avenue, the back yard of 1468 Queeny Avenue, the back yard of 1425 Nickell Street, and the front yard of 1433 Nickell Street. The four composite soil samples were analyzed for polychlorinated biphenyls (PCBs) and dioxin/furans. Enclosed are the results along with an EPA fact sheet that describes the complete results for the community.

The levels of PCBs and dioxin/furans at all five properties were below current preliminary remediation goals (cleanup goals) recommended by EPA. However, because your properties are in an area with many industries, we are enclosing a fact sheet from the Illinois Department of Public Health about how to reduce exposure to contaminants in soil. You may wish to share this information with your tenants.
